

## Quality policy :

AQUADEF Diesel Exhaust Fluid (DEF) is manufactured in a climate controlled, State of the Art facility, Our Diesel Exhaust Fluid's making plant maintains complete contaminate control in every phase of production.

AQUADEF Diesel Exhaust Fluid stands out in the market as it is exclusively produced using highly purified technical grade urea sourced solely from GNFC. This fluid is manufactured under strictly controlled, clean conditions using ultra de-mineralized water. It undergoes a triple filtration process and adheres to stringent quality controls to ensure superior performance.

AQUADEF confirms the DEF product manufactured by us meets highest quality as per international standards

1. High quality technical grade urea (GNFC only) used with quality standard meets ISO22241.
2. DI water electric conductivity less than 0.1US/CM much better than ISO 22241 standard.
3. Concentration automatically managed using state of the art computer controlled process automation equipment's at 32.5%, which qualified with ISO22241 standard 31.8%-33.2%
- 4- Aquadef - Each batch has been dispatched only after generating a Quality Test Certificate that confirms compliance with ISO 22241 standards using the ATAGO RX- 5000i - Automatic Digital testing lab Equipments procured from ATAGO Japan - world leader in DEF testing technology, Batch Testing certificate will be provided along with the dispatch invoice upon customers request.
